Re: PS Docket No. 07-114

Secretary Dortch,

As the Government Affairs Chairman of the Arkansas Ambulance Association, the EMS providers in our state are always concerned about being able to find the people who desperately need our help. I have witnessed, first-hand, the tragic consequences of an outdated system. The lives of the public are at stake, and this is a matter of great urgency for public safety institutions and officers in Arkansas.

I was encouraged when the FCC proposed raising their indoor location accuracy standards earlier this year. However, it seems now as though the FCC's plan is at risk of being abandoned in favor of a far weaker plan. I understand that several cell phone companies have put forth a proposal that significantly delays any meaningful update of these standards. It relies on faulty technology, and doesn't come close to adequately improving indoor location accuracy through lax standards and benchmarks.

Please don't prioritize corporate interests over American lives. Giving our emergency responders the tools they need to save lives must remain at the top of our list. I urge you to reject this proposal and proceed immediately with the FCC's proposal to update the standards for indoor location accuracy.

Sincerely,

Ken Kelley, Chair
ArAA Government Affairs
